RDaSH – En-suite Doors

Product Used

Fully Wrapped Doors with Anti-bacterial Impact Protection Sheet, Door Top Alarm and SECURAHinge™

Client

Rotherham Doncaster and South Humber NHS Foundation Trust
– Property Management

Market Sector

Mental Health

The Project Brief

Rotherham Doncaster and South Humber NHS Foundation Trust (RDaSH) operates services in 200 locations across Rotherham, Doncaster and North Lincolnshire. It provides a range of inpatient and community mental health, learning disability and addiction services for adult, young people and children.

At one facility the trust had an issue with swelling doors situated on a ward. This prevented them from closing properly which caused concerns for privacy, security and safety. As continuous improvement of service quality is a primary goal, the Trust was keen to find a solution that was cost effective yet swiftly solved the problem.

The Solution

The solution offered by Intastop was to fully clad the door in its high quality anti-bacterial impact protection sheet which prevents water absorption and protects from damage.

The trust also wanted to ensure the door had full anti-ligature protection so they chose the Door Top alarm which provides assistance aid to ward staff, by detecting a ligature attempt on the top of the door and the new SECURAHinge™. This full length continuous geared hinge with anti-ligature tip vastly improves safety and minimises ligature risk thanks to a number of design features such as the tapered tip and smooth pivots.

Overall a total door protection and prevention solution was provided to RDaSH within the given time frame.

What the client says

Estates Operations Manager for the Trust, Andrew Stringer said: "Our priority was to address all concerns experienced with the door such as swelling and ligature opportunities but we had limited time to get the refurbishment completed. Intastop has been able to provide us with everything we required. Their solution based approach ensured we were able to address the issues found with the door and increase the safety of our patients by minimising ligature risk. They were able to do all this within one day which ensured our facility experienced minimal disruption."

The Benefits

- Helps reduce patient suicide and self-harm
- Gives patients privacy
- Reduces maintenance and life cycle costs
