

Project

York Hospital – MRI Waiting Area

Product Used

Digi-Print Sheet

Client

York Teaching Hospital NHS Foundation Trust – Places Protection

Market Sector

Acute Healthcare

The Project Brief

York Teaching Hospital NHS Foundation Trust commissioned artistic wall protection from manufacturer Intastop Ltd after the its MRI waiting area at York Hospital was suffering damage from the backs of chairs scuffing the perimeter walls leaving unsightly and unhygienic levels of damage.

The Solution

Intastop Digi-print Sheet is suitable for doors, walls or a mural scheme and can be utilised in a variety of situations. It offers scratch resistant surfaces and also an extra hard coating making it perfect for high traffic areas too such as front of house and waiting rooms. Furthermore, as this product is completely bespoke, any size and colour scheme can be adopted giving clients a greater degree of flexibility.

The sheet at York Hospital was printed with a series of photographic images that were taken by staff from the MRI Unit which captured nature and the great outdoors. Any images or logos can be printed onto the sheet using vivid colours and the durable wipe clean surface is easy to care for and hygienic.

The Benefits

- Create bespoke attractive designs to suit your environment
- Maintains a clean safe environment ensuring staff and patient hygiene safety
- Maintain maximum impact of your surroundings

What the client says

We needed to protect the walls and brighten up a waiting area. Digi-print Sheet by Intastop Ltd gave us the flexibility we needed to be able to utilise our own images making it a really personalised area whilst at the same time delivering the impact protection for our walls. We are so pleased with the product and it has really made a difference to a previously bland waiting room. It's great to be able to get something that is not only hard wearing but aesthetically pleasing too and we wouldn't hesitate to recommend or use Intastop products again.
