

BISHOP AUCKLAND HOSPITAL

IN BRIEF

Sector: Acute Healthcare
Contractor: ISS Mediclean
Products: Inpro IPC 1200 combined handrail, PVC Sheet, Corner Guards
Approx. value: £17,000

PROJECT CHALLENGES

- Colour matched products, to offer enhanced aesthetic.
- Minimal disruption to busy areas during installation.
- Durable and long lasting solution for walls and corners.

Rebecca was fantastic on the lead-up to the project, providing a great price and ensuring we had the materials and labour we needed. Intastop's chosen installer, Jason, was excellent in his work ethic and time management, keeping us informed of his progress throughout.

PROJECT OVERVIEW

The refurbishment of Ward 16 at Bishop Auckland Hospital focused on modernising the ward and improving its, cleanliness, and aesthetic appeal. The team chose Intastop's Inpro IPC 1200 combined handrail, PVC wall protection sheet, corner guards, and door protection, because of their ability to safeguard surfaces from damage. Whilst also being easy to clean, supporting infection control protocols and maintaining a professional, modern appearance.

SOLUTION

A significant challenge of the project was the tight four-week timeframe to complete the work while ensuring all materials and installations met healthcare standards. Intastop installation team's expertise ensured an efficient installation and clear progress updates throughout the project.

The installed products not only improved the ward's appearance but also significantly enhanced its durability and ease of maintenance, a critical factor in high-traffic healthcare environments.
