

HEREFORD COUNTY HOSPITAL FIRE DOORS

IN BRIEF

Sector: Healthcare
Contractor: Sodexo
Products: Type 2 acute healthcare doorsets

CHALLENGES

- Working within live wards
- Installing during critical and busy winter period with minimal disruption

We have used Intastop previously for their wall protection products and been impressed with their service.

The team were fantastic and their attention to detail and understanding of the challenges we faced were first class. By using them for fire door replacements, we can utilise their huge range of products and almost use them as a one-stop shop.

Adam Coates, Wye Valley NHS Trust

PROJECT OVERVIEW

Hereford County Hospital, working in partnership with Sodexo and Wye Valley NHS Trust required a phased fire door replacement programme. It involved the installation of BM Trada-certified fire doors across live wards, ensuring full compliance with fire safety standards while maintaining the day-to-day operation of a busy hospital environment.

THE SOLUTION

Intastop supplied and installed its Type 2 acute healthcare doorsets, specifically designed for high-traffic clinical environments.

These doorsets combine robust fire performance with durability and ease of maintenance, helping estates teams meet compliance requirements while reducing long-term lifecycle costs. Intastop's ability to provide both doors and complementary protection products as one, supported the project by streamlining procurement and ensuring consistency across the site.
